

NO VOC Statement

CAIG Statements of No VOC's:

Where a product is flagged as NO VOC's or where the NO VOC's icon is used, this means that, based on information provided by our suppliers, the product is in compliance with the current regulations and contains no VOC's.

Effective January 1, 2007, the states of CA, DE, DC, MD, NH, NJ, NY, PA enacted even more stringent legislation regulating VOC (Volatile Organic Compounds) Content in Consumer Products. Products manufactured after this date must meet these new standards for Reduced VOC Content. In their effort to provide safe, clean air to all Californians and protect the public from exposure to toxic air contaminants.

The California Air Resources Board (CARB) and Air Quality Management District (AQMD) lead the way for regulating the reduction of VOC's in our daily life. California's Air Quality Regulations are the most stringent in the United States. The rest of the country and the Environmental Protection Agency (EPA) usually follows California's lead on Environmental Legislation.

Being a California Company, CAIG Laboratories' understands the importance of environmental concerns and the impact our products have on people and ecosystems. Our own quality of life is affected by our decisions to make a product better and safer. Our research and development team work to stay ahead of regulations and meet the challenge of providing the public with a socially acceptable product in terms of safety, quality, VOC compliance and performance. And we continue to work on alternative methods to make all of our products completely VOC Free.
